Fulbright U.S. Scholar Program: Reference List

Race, Sport & Social Equity: Transatlantic Perspectives from US HBCUs and South African HDIs

Dr. Micah J. Dobson | Johnson C. Smith University

Arendse, L., & Ross, E. (2025). Stakeholder perceptions of an after-school programme at a no-fee school on the Cape Flats. *South African Journal of Childhood Education*, 15(1), Article a1641.

Framed by Bronfenbrenner's Ecological Theory, this qualitative case study examines an after-school programme (ASP) at a no-fee primary school in Bonteheuwel on the Cape Flats. The findings reveal that while the ASP provides a vital safe haven from gang violence and fosters holistic youth development, it faces systemic hurdles, including chronic resource constraints, funding shortages, and strained school-NPO collaboration.

Burnett, C. (2021). Framing a 21st century case for the social value of sport in South Africa. *Sport in Society*, 24(3), 340–355.

This paper frames an evidence-based case for the social value of sport in post-apartheid South Africa, aligning global frameworks (such as the Kazan Action Plan and UN SDGs) with national development priorities. Burnett critically evaluates sport's capacity to foster social cohesion, drive nation-building, reduce deviant behavior, and advance transformation. While rejecting the panacea view of sport, the study emphasizes methodological rigor and policy coherence to maximize sustainable community outcomes.

Cloete, E., & Young, M. (2021). *Analysing best high-performance sports management practices to develop guidelines for Historically Disadvantaged Institutions* (Master's thesis). University of the Western Cape.

Historical disparities continue to shape high-performance sport management across South African universities today. By adapting the SPLISS framework to highlight the divide between historically white and disadvantaged institutions, this research identifies acute barriers such as funding shortfalls and facility deficits. Crucially, it cautions against simply replicating resource-heavy models, offering instead localized governance strategies, such as dual-career student-athlete support, that will directly inform the comparative institutional analysis between UWC and JCSU.

Collett, K. S., & Slapac, A. (2024). Social justice pedagogy: International perspectives on Collaborative Online International Learning (COIL) through a World Café engagement. *Journal of Virtual Exchange*, 7(SI-IVEC2023), 42–62.

Utilizing Nancy Fraser's social justice framework, this practice report examines how Collaborative Online International Learning (COIL) can foster participatory parity across economic, cultural, and political dimensions. Drawing on a World Café workshop with 45 international educators, the authors identify critical barriers to equitable exchange, such as the global digital divide, language hegemony, and institutional resource gaps, while offering actionable strategies for culturally responsive, socially just transatlantic curriculum design.

Dobson, M. J. (2024). Teaching for social justice through physical education in the context of US legislation and policies against critical race theory. In *Routledge Handbook of Sport, Leisure, and Social Justice*. Routledge.

The current political climate in the U.S. has imposed severe pedagogical constraints on educators navigating anti-CRT legislation. By framing these challenges through the lens of Critical Race Theory, this chapter outlines actionable strategies for resisting curricular censorship and sustaining anti-racist frameworks. This proposed project provides the core conceptual foundation for understanding how state-level political pressures directly shape institutional equity and local sport governance.

Dobson, M. J. (2026). *Developing inclusive physical education programs in the 21st century*. Routledge.

Universal design principles and culturally responsive pedagogy are essential for building adaptive physical education programs in diverse learning environments. Outlining actionable models for both secondary and postsecondary settings, this text serves as a structural baseline for capacity building in under-resourced athletic departments. It directly informs the project's approach to cross-cultural pedagogical intervention and student-centered curriculum design.

Foster, S. J. L., Singer, J. N., & Cooper, J. N. (2022). (BLACK) listed: The college sport landscape, Historically Black Colleges and Universities, and a theory of racialized organizations. *Journal of Issues in Intercollegiate Athletics*, 15, 416–443.

Applying Victor Ray's Theory of Racialized Organizations, this conceptual study interrogates structural inequities experienced by Historically Black Colleges and Universities (HBCUs) within NCAA intercollegiate athletics. The authors demonstrate how racialized governance, disparate revenue distributions, and biased media coverage marginalize HBCU athletics while enriching predominantly white institutions. The article emphasizes the transformative power of athlete empowerment and critical institutional reform in advancing racial parity.

Jara-Pazmino, E. S., Brito-Rhor, M. D., & Pack, S. M. (2023). Building bridges across cultures: Using Collaborative Online International Learning (COIL) in the sport management classroom. *Sports Innovation Journal*, 2023(SI), 49–61.

Virtual exchange offers a highly cost-effective model for internationalizing sport management curricula. By pairing students in the United States and Ecuador for collaborative projects, this research proves that cross-border, peer-to-peer engagement significantly enhances cultural adaptability and global perspectives. These empirical outcomes validate the project's pedagogical pillar, confirming that the COIL integration between JCSU and UWC will provide high-impact intercultural communication training for minority students who lack access to traditional study abroad.

McGhie, V., & Keim, M. (2017). Understanding the needs and challenges of a Black community in South Africa. *Development Southern Africa*, 34(5), 624–638.

Drawing on Vygotsky's Social Cultural Theory and Max-Neef's Human Scale Development Theory, this empirical study investigates the socio-economic challenges, basic human needs, and self-reliance aspirations of an unemployed cohort in Gugulethu Township on the Cape Flats. The authors highlight how apartheid's structural legacies perpetuate poverty and educational barriers, while demonstrating how targeted community-engaged training, local stakeholder partnerships, and capacity-building programs foster self-determination. It provides vital empirical and geographic grounding for participatory research and community engagement initiatives within marginalized Cape Flats communities.

Mululuma, A., Mugwedi, N. P., & Malema, M. (2025). Promoting recreational opportunities and experiences of students with disabilities at a university in Limpopo Province, South Africa. *Frontiers in Sports and Active Living*, 7, Article 102505.

This qualitative study investigates recreational access for students with physical disabilities at the University of Venda, a rural Historically Disadvantaged Institution (HDI) in South Africa. The authors identify persistent barriers, including inaccessible facilities, lack of adaptive equipment, and social marginalization. To promote physical well-being, mental health, and social integration, the study recommends unified sports programs, targeted disability awareness campaigns, and tailored infrastructure investments.

Swart, K., & Ebrahim, P. (2026). Sport and sustainability in South Africa: Sport, events, and tourism as a driver of sustainability. In B. Knott & C. Tinaz (Eds.), *Sport and Sustainability in Emerging Nations* (pp. 172–190). Routledge.

The legacy of the 2010 FIFA World Cup in the Western Cape offers a powerful lens for evaluating the implementation of sport policy against on-the-ground reality. By examining local government initiatives, the authors warn against superficial "green-sportswashing" and instead advocate for balanced event portfolios that prioritize grassroots community sports. Their socioecological framework for long-term racial and economic redress offers a critical baseline for analyzing South African sport transformation during the Fulbright fieldwork.
